Executive Summary

Candidate: Anuz Subedi (anuzsubedi)

Location: Toronto / Windsor area contact

Stack: JavaScript, Python, TypeScript, React/Next.js, macOS/SwiftUI, CSS/HTML

Current status: Pre-revenue bootstrapped startup seeking experience; open to co-op / unpaid-with-equity arrangement.

Your reality: TAURUS AI Corp is a Canadian corporation, bootstrapped, pre-revenue, with significant product momentum but no salary runway today. You cannot legally employ someone unpaid at a for-profit Ontario corporation unless it is a true academic co-op placement or a narrowly defined training exception.

Best path forward: Structure this as a **paid co-op or short-term project contract** funded by the **Ontario Co-operative Education Tax Credit** and/or the **Student Work Placement Program (SWPP / Talent Opportunities Program)**. A \$10,000 four-month co-op placement can cost you as little as \$2,000–\$3,000 out of pocket after subsidies.

This document contains: 1. A full 30–45 minute meeting script. 2. The 10 questions to ask and the answers you want to hear. 3. Red flags to watch for. 4. A practical skills test. 5. Concrete starter projects. 6. Funding options and next-step checklist.

Before the Meeting

Confirm logistics: - Send a calendar invite with a Google Meet or Zoom link. - Attach this one-pager: *“Taurus AI — What we build and how we work.”* - Ask him to bring: resume, transcript or co-op letter (if enrolled), and one GitHub repo he is proud of.

Have these links ready to screen-share: - <https://tera-package.vercel.app> — live client brand package (shipped today). - <https://github.com/Taurus-Ai-Corp/Nexus> — monorepo scale. - Any live Mater Maria Homes or Nexus Real Estate URL.

Part 1 — Full Meeting Script

Opening (2 minutes)

“Thanks for reaching out, Anuz. I looked at your portfolio, your GitHub, and askk. I’m glad you’re interested. Before we talk about a role, I want to be straight with you: **TAURUS AI Corp is a bootstrapped Canadian corporation.** We have a lot of IP and product momentum, but we are pre-revenue right now. That means any arrangement we build has to be honest, legal, and mutually useful. If you’re open to that, I think there is real work here that could accelerate both of us.”

Company Story (3–4 minutes)

“We are **TAURUS AI Corp**, a Windsor-based AI infrastructure and automation company operating the **Nexus** agency brand. We build three layers of things:

1. **AI-powered client platforms** — brand sites, social automation, real-estate tools, eldercare SaaS, pet-care apps.

2. **Deep-tech infrastructure** — post-quantum cryptography tooling, Hedera/Hiero blockchain audit trails, multi-agent orchestration, open-source payment orchestration.
3. **Internal agency systems** — our own Google Workspace bridge, grant automation, design studio, and deploy pipeline.

We have roughly a dozen active projects. Some are client deliverables like the TERA package I just shipped today [show <https://tera-package.vercel.app>]. Some are R&D like our PQC CLI and agent orchestrator. We are also in the middle of grant applications that could fund the next phase.”

The Opportunity (3 minutes)

“I’m looking for someone who can help us do three things:

1. **Turn AI-generated brand assets into real, deployable client surfaces** — landing pages, demo galleries, pitch decks.
2. **Prototype front-ends for our Phase 0 products** so we can demo them to clients and grant reviewers.
3. **Support documentation and grant application work** — formatting, research, and clear technical writing.

Because we are pre-revenue, I can’t offer a market salary today. What I *can* offer is:

- Real shipping work under your name.
- Mentorship across AI/LLM, blockchain, and agency systems.
- A path to paid equity or revenue-share as products monetize.
- Help structuring this as a formal co-op so you get school credit and we can access wage subsidies that make this nearly cost-neutral for us.

If you are currently enrolled in a co-op program at a Canadian college or university, we can likely pay you a modest wage and have grants cover most of it.”

Part 2 — Questions to Ask & Expected Answers

1. School / Co-op status

Ask: “Are you currently enrolled in a Canadian post-secondary program? Co-op or internship stream?”

Desired answer: - Yes, enrolled in a diploma, degree, or certificate program with a formal co-op or work-integrated learning (WIL) component. - Can provide a co-op letter or school contact.

What to listen for: - Enthusiasm about getting academic credit for work. - Understanding that this needs institutional paperwork.

Red flag: - No school affiliation and insists on unpaid work indefinitely. That is legally risky for both of you.

2. Immigration / work status

Ask: *“What is your immigration or work status in Canada?”*

Desired answer: - Canadian citizen, permanent resident, or protected refugee with unrestricted Canadian work rights. - International student with valid study permit and authorized co-op work permit (if applicable).

What to listen for: - Clear, honest answer. - Willingness to provide documentation if needed for grant compliance.

Red flag: - Evasive answers, no work authorization, or expectation of cash-under-table payment.

3. Deep-dive on askk

Ask: *“Walk me through askk — what stack, what was the hardest part, and what would you do differently?”*

Desired answer: - Built with SwiftUI / AppKit / macOS native APIs plus a local LLM API client. - Hardest part was the global hotkey/Spotlight-style window, sandboxing, or managing async LLM streams. - Would improve error handling, add Ollama auto-discovery, or write tests.

What to listen for: - Ownership of trade-offs. - Recognition that shipping native apps is harder than web apps. - Comfort with privacy-first local AI tooling.

Red flag: - Cannot explain the architecture or blames the framework for everything.

4. Deep-dive on the markdown editor

Ask: *“Walk me through your markdown editor — how does the WYSIWYG and PDF export work?”*

Desired answer: - TypeScript / React-based editor with a Markdown parser and live preview. - PDF export uses a library like `html2pdf.js`, `jsPDF`, `react-pdf`, or `puppeteer` / headless browser. - Discusses layout control, page breaks, typography, and print CSS.

What to listen for: - Experience with document rendering and export pipelines. - Attention to formatting details that matter for client deliverables.

Red flag: - “It just uses a library” with no understanding of the rendering pipeline.

5. Hardest bug solved

Ask: *“What is the most complex bug or performance problem you’ve solved?”*

Desired answer: - Describes a specific incident: symptom, diagnosis, fix, and verification. - Mentions tools like browser DevTools, profiling, logging, or a reproduction test case. - Shows persistence and methodical debugging.

What to listen for: - Problem-solving process, not just the final answer. - Ability to communicate technical challenges clearly.

Red flag: - Cannot name a single hard bug, or every bug is “someone else’s fault.”

6. Certifications

Ask: *“When you said you’re prepared to obtain certifications, which ones are you thinking of?”*

Desired answer: - Cloud: AWS Cloud Practitioner, Azure Fundamentals, or GCP Associate. - Security: CompTIA Security+, CISSP Associate, or similar. - Web: Meta Front-End Developer, freeCodeCamp, or relevant bootcamp certificates. - Shows he has researched what your stack needs.

What to listen for: - Self-awareness about gaps. - Commitment to closing them quickly.

Red flag: - No specific plan — just “whatever you want.”

7. Learning goals

Ask: *“What do you actually want to learn in the next 6–12 months?”*

Desired answer: - AI/LLM integration, agent systems, or local model deployment. - Full-stack production systems (Next.js, backend, databases, deployment). - Startup operations: product, fundraising, grants, client delivery.

What to listen for: - Ambition aligned with your roadmap. - Willingness to wear multiple hats.

Red flag: - Only wants to do one narrow thing and refuses adjacent work.

8. Why a zero-revenue startup?

Ask: *“Why a zero-revenue startup instead of an established company?”*

Desired answer: - Wants breadth, ownership, and real impact. - Understands the risk and is betting on learning + equity upside. - Believes in the mission or the founder.

What to listen for: - Realism, not just romanticism. - Evidence that he has thought about the trade-off.

Red flag: - Desperation or vague “I just need a job” energy.

9. Time commitment

Ask: *“How many hours per week can you realistically commit?”*

Desired answer: - 10–20 hours/week during school; 35–40 hours/week during co-op term. - Clear boundaries and a proposed schedule.

What to listen for: - Honesty about other commitments. - Consistency matters more than raw hours.

Red flag: - Promises 40 hours while obviously unable to deliver.

10. Async work comfort

Ask: *“Are you comfortable working mostly async with weekly check-ins?”*

Desired answer: - Yes, and can demonstrate it with Notion, GitHub issues, Linear, or daily standup updates. - Comfortable asking for help when blocked.

What to listen for: - Self-management and written communication skills.

Red flag: - Needs constant hand-holding or disappears when working remotely.

Part 3 — Red Flags

Watch for these signals during the call:

Red Flag	Why It Matters
Unwilling to discuss school or work status Expects unpaid work indefinitely	Legal / payroll / grant eligibility issues. Violates Ontario employment law at a for-profit corp.
Cannot explain any project architecture	He will need to work in complex existing codebases.
Blames tools/frameworks for all failures Only wants to do UI/UX and refuses backend or docs	Lack of ownership and growth mindset. You need generalists right now.
No evidence of shipping anything Disparages your pre-revenue status Cannot commit to a 2-week sprint test	The work here requires actual deployed output. Culture / motivation mismatch. Not serious enough to invest time.

Part 4 — Practical Skills Test

Do **not** give a LeetCode test. Give a **Taurus-shaped practical task** with a 48-hour deadline.

Recommended Test

Assignment: “Rebuild the hero section of the TERA package (<https://tera-package.vercel.app>) as a Next.js page. Match the look, fonts, and responsive behavior. Deploy it to Vercel or Netlify and send me the URL.”

What it tests: - Can he read existing code and replicate it? - Can he deploy a static Next.js site?
- Does he pay attention to typography, spacing, and mobile breakpoints?

Evaluation rubric:

Criterion	Excellent (3)	Good (2)	Needs help (1)
Visual fidelity	Matches within 90%	Minor spacing/font issues	Looks nothing like original
Mobile responsiveness	Clean breakpoints	Usable but rough	Broken on mobile
Deployment	Live URL works	Deployed with minor issues	Cannot deploy
Code quality	Clean, readable	Acceptable	Messy / unreadable
Communication	Asks clarifying questions	Silent but ships	No delivery

Alternative tests if he lacks Next.js experience: - Add a dark-mode toggle to a Taurus landing page. - Write a one-page summary of how the Ontario Co-op Tax Credit + SWPP could fund his role. - Build a simple “Grant Tracker” static page listing active grants, deadlines, and statuses.

Part 5 — Concrete Starter Projects

If he passes the test, assign one of these as the first 2-week paid sprint:

1. Nexus Creative Brand Site

Build a polished landing page for taurus-nexus-creative that explains the dev-config package and links to GitHub.

2. Mater Maria Assets Expansion

Add 2–3 new static pages to the existing Mater Maria client portal (e.g., testimonials, contact form).

3. Grant Tracker Dashboard

A simple Next.js or static page listing all active grant applications, deadlines, statuses, and documents.

4. Nexus Real Estate Landing Polish

Improve the existing landing/questionnaire UI, make it mobile-responsive, and add a lead-capture form.

5. Social Suite Mockups

Build 3 clickable UI mockups for the social-suite-dashboard to demo to prospects.

Each project is self-contained, client- or demo-visible, uses his JS/TS/React skills, low architectural risk, and shippable in 2 weeks.

Part 6 — Funding: How to Pay Him Without Breaking the Bank

Option A: Ontario Co-operative Education Tax Credit

- **What:** Refundable Ontario tax credit for hiring co-op students.
- **Rate:** 30% if your prior-year payroll is $\leq$ \$400,000; 25% if $\geq$ \$600,000.
- **Max:** \$3,000 per qualifying work placement.
- **Requirement:** Student must be enrolled in a qualifying Ontario college/university co-op program; placement must be at least 10 consecutive weeks.
- **How to claim:** Corporations file Schedule 550 with T2; unincorporated use Form ON479.

Option B: Student Work Placement Program (SWPP) / Talent Opportunities Program (TOP)

- **What:** Federal wage subsidy delivered in Ontario by the Ontario Chamber of Commerce.
- **Subsidy:** Up to 50% of wages, capped at \$5,000 per placement.
- **Net-new rule:** Does **not** apply to businesses with fewer than 100 employees.
- **Eligible students:** Canadian citizens, permanent residents, or protected refugees in a Canadian post-secondary WIL program.
- **Apply:** occ.ca/talent-opportunities-program

Combined Math (Example)

Item	Amount
4-month co-op wages (part-time)	\$10,000
SWPP/TOP subsidy (50%)	– \$5,000
Remaining employer-paid wages	\$5,000
Ontario Co-op Tax Credit on employer-paid portion (~30%)	– \$1,500
Net cost to TAURUS AI	~\$3,500

Bottom line: For roughly \$3,500 out of pocket, you get a motivated co-op developer working on real products for 4 months. This is far safer and more attractive than “unpaid.”

Part 7 — How This Makes You a Better Company

Onboarding Anuz forces you to level up, even without revenue:

Skill You Build	How Hiring Him Forces It
Prioritization	You can't give him 12 projects. You must pick the highest-leverage one.
Spec writing	You must write down what you want instead of vague ideas.
Delegation	You learn to trust output you did not personally code.
Legal/HR hygiene	NDA, contract, payroll/tax setup, grant applications.
Sales/pitch	You must articulate why someone should join despite no salary.
Culture	You start defining how TAURUS AI works: async, shipping, documentation.

Even if he only stays three months, you will have **documentation, a cleaner onboarding path, and a shipped client-facing asset** that did not exist before.

Part 8 — Next Steps Checklist

Before the call: - [] Send calendar invite + agenda. - [] Attach one-pager about TAURUS AI. - [] Prepare screen-share links (tera-package.vercel.app, GitHub repo).

During the call: - [] Use the script in Part 1. - [] Ask all 10 questions from Part 2. - [] Note any red flags from Part 3.

Within 24 hours after the call: - [] Send the practical test from Part 4. - [] Ask for school/co-op documentation if he is enrolled.

If he passes the test: - [] Draft a 2-week paid sprint agreement (even \$500–\$1,000 is better than unpaid). - [] Confirm his work authorization and tax details. - [] Apply to SWPP/TOP if eligible: occ.ca/talent-opportunities-program - [] Set up GitHub repo access and weekly 30-min check-ins.

Use his output in grant narratives: - [] Add “team expansion / co-op hire” to IRAP, FedDev, and SR&ED applications. - [] Document his work as evidence of product development activity.
