PRD: Quantum-Secure CEO Command Center

Date: April 1, 2026

Platform: TAURUS AI Corp (Canada Federal)

Status: Phase 1 Complete — Backend Running via PM2

1. Executive Summary

A quantum-secure command platform that allows the CEO to control company operations through Telegram and a web dashboard. The system uses brain focus scores (GCR) to determine how much autonomy AI agents have, with post-quantum cryptography signing all governance decisions.

2. Corporate Structure

TAURUS AI CORP (Canada Federal) - Parent Company / HQ

Corporation #: 1702855-5

Ontario OCN: 1001270625

TAURUS AI Corp - FZCO (Dubai) - Operating Entity

License #68122, IFZA Dubai

NeoVibe Platform (Luxury Design)

BizFlow Platform (Business Automation)

ARQ QUANTUM LLC (Wyoming, USA) - Operating Entity

WY SOS ID: 2026-001887149

Q-Grid Platform (PQC Services)

3. What Was Built (This Session)

3.1 Backend Server (RUNNING)

- **File:** /Users/taurus_ai/Documents/HEDERA/hedera-orchestrator/src/simple-unified.ts
- **Port:** 3006
- **Process Manager:** PM2 (taurus-backend)
- **Status:** Running 24/7, auto-restart on boot

3.2 API Endpoints

Endpoint	Method	Purpose
/health	GET	Server health check
/api/cognitive-state	GET	GCR focus score + autonomy level
/api/set-gcr?score=0.92	GET	Manual GCR override (for demos)

Endpoint	Method	Purpose
/api/execute	POST	Execute commands with governance check

3.3 Telegram Bot Commands

Command	Syntax	What It Does
/help	/help	Shows all commands
/start	/start	Same as /help
/status	/status	System health + GCR score
/balance	/balance	Hedera account info
/platforms	/platforms	List all platforms + URLs
/deploy	/deploy <platform> <staging\ production>	Deploy to URL
/setgcr	/setgcr 0-100	Set focus score (demo)
/resetgcr	/resetgcr	Reset to live GCR
/confirm	CONFIRM <platform> <env>	Confirm production deploy

3.4 Web Dashboard (Cursor-Built)

- **File:** /Users/taurus_ai/Documents/HEDERA/apps/taurusai-io/
- **Port:** 3010
- **Auth:** Telegram Login Widget → HMAC-SHA-256 → JWT session
- **Pages:** /login, /admin (protected)

4. Platform URLs

Platform	Staging	Production	Operating Entity
NeoVibe	staging- neovibe.taurusai.io	neovibe.taurusai.io	TAURUS AI Corp - FZCO
BizFlow	staging- bizflow.taurusai.io	bizflow.taurusai.io	TAURUS AI Corp - FZCO
Q-Grid	staging- qgrid.taurusai.io	q-grid.net	ARQ QUANTUM LLC

5. Credentials & Config

Telegram Bot

BOT_TOKEN: 8717284863:AAG_ldBIxMdD2xT1V7_1pQfVAzdRvOC9V_I
 BOT_NAME: @TaurusAI0psBot

Hedera Testnet

ACCOUNT_ID: 0.0.7231851

NETWORK: testnet

GOVERNANCE_TOPIC: 0.0.8076305

Environment Files

- Backend: /Users/taurus_ai/Documents/HEDERA/hedera-orchestrator/.env
 - Web Dashboard: /Users/taurus_ai/Documents/HEDERA/apps/taurusai-io/.env.local
-

6. Files Created/Modified This Session

New Files

File	Purpose
simple-unified.ts	Backend server (Telegram bot + API)
pqc_executive_security.py	ML-DSA-65 PQC signing
telegram_command_listener.py	PQC command verification
neuromorphic_governance.py	GCR cognitive state engine
hedera_hcs_governance.py	HCS audit trails
ceo_command_center.html	Alpine.js login widget
docs/session-outputs/PRD-CEO-COMMAND-CENTER.md	
docs/session-outputs/TAURUS-AI-Executive-Command-Platform-Session-Output.md	
docs/session-outputs/TAURUS-AI-Executive-Command-Platform-Session-Output.pdf	

Modified Files

File	Change
simple-unified.ts	Added platform config, /deploy, /platforms, /help
nav.tsx	Added lock icon linking to /admin

7. How to Run Everything

Start Backend (24/7)

```
# Check status
```

```
pm2 status
```

```
# If not running:
```

```
cd /Users/taurus_ai/Documents/HEDERA/hedera-orchestrator
```

```
pm2 start "npx ts-node src/simple-unified.ts" --name taurus-backend
```

```
pm2 save
```

```
# Auto-start on boot (run once):  
sudo env PATH=$PATH:/opt/homebrew/Cellar/node/25.8.1_1/bin /opt/homebrew/lib/node_modules/pm2/
```

Start Web Dashboard

```
cd /Users/taurus_ai/Documents/HEDERA/apps/taurusai-io  
pnpm dev  
# Runs on http://localhost:3010
```

PM2 Management

```
pm2 status          # Check status  
pm2 logs taurus-backend # View logs  
pm2 restart taurus-backend # Restart  
pm2 stop taurus-backend  # Stop
```

8. How GCR (Focus Score) Works

Measurement Flow

```
EEG Device (Muse 2/OpenBCI)  
  ↓ (256 samples/sec)  
Phase Locking Value Algorithm  
  ↓ (every 5-10 seconds)  
GCR Score (0.0 - 1.0)  
  ↓  
Autonomy Level Calculation:  
  90%+ → 90% autonomy (AI does almost anything)  
  75%+ → 70% autonomy (AI does most things)  
  60%+ → 50% autonomy (AI asks for risky stuff)  
  <60% → 30% autonomy (AI asks for everything)
```

Current Status

- **GCR API:** Broken (returns HTML instead of JSON)
 - **Fallback:** Hardcoded 0.85 (85%)
 - **Manual Override:** `/setgcr 90` for demos
 - **Real EEG:** Not connected (needs Muse 2 / OpenBCI hardware)
-

9. How Deploy Works

Command Syntax

```
/deploy <platform> <environment>
```

Examples:

```
/deploy neovibe staging
```

```
/deploy bizflow production
/deploy q-grid staging
```

Flow

1. User sends /deploy neovibe staging
2. System checks GCR score
3. If autonomy $\geq$ 50% (staging) or $\geq$ 70% (production):
 - Auto-approve deployment
 - Generate execution hash
 - Store governance record
 - Return target URL + execution ID
4. If autonomy too low:
 - Ask for CONFIRM
 - User replies: CONFIRM neovibe staging
 - Deploy proceeds

URLs Deployed To

Command	URL
/deploy neovibe staging	staging-neovibe.taurusai.io
/deploy neovibe production	neovibe.taurusai.io
/deploy bizflow staging	staging-bizflow.taurusai.io
/deploy bizflow production	bizflow.taurusai.io
/deploy q-grid staging	staging-qgrid.taurusai.io
/deploy q-grid production	q-grid.net

10. Test Commands

Test Backend

Health check

```
curl http://localhost:3006/health
```

Cognitive state (focus score)

```
curl http://localhost:3006/api/cognitive-state
```

Set GCR override (demo)

```
curl "http://localhost:3006/api/set-gcr?score=0.92"
```

Execute command

```
curl -X POST http://localhost:3006/api/execute \
  -H "Content-Type: application/json" \
  -d '{"command": "analyze", "params": {"target": "https://github.com/hiero-ledger"}, "userId"
```

Test Telegram

Send these to @TaurusAIOpsBot:

```
/start      → Shows all commands
/status     → System status
/platforms  → List platforms + URLs
/setgcr 90  → Set focus to 90%
/deploy neovibe staging → Deploy NeoVibe to staging
```

Test Web Dashboard

open <http://localhost:3010/login>

Login with Telegram account

Access /admin dashboard

11. What's NOT Done Yet

Critical

1. **GCR API Broken** — HuggingFace endpoint returns HTML, not JSON
2. **No Real EEG** — Need Muse 2 (\$250) or OpenBCI (\$500+) hardware
3. **No Actual Deploy Pipeline** — URLs return 404 (not connected to Vercel)
4. **No PQC Integration** — Python PQC module not connected to Node.js server
5. **No HCS Audit** — Hedera topic messages not being submitted

Nice to Have

6. **No /transfer command** — HBAR transfers not implemented
 7. **No /recon command** — Reconnaissance features not implemented
 8. **No monitoring** — No uptime monitoring for backend
 9. **No SSL** — Backend running HTTP only
-

12. Next Steps (Priority Order)

Phase 1: Stabilize (Do First)

1. Fix GCR API or add manual input UI
2. Connect to actual Vercel deploy API
3. Add PQC signing to Node.js server
4. Test full flow: Telegram → Backend → Deploy

Phase 2: Enhance

5. Add /recon command (brave-search + playwright)
6. Add /transfer command (HBAR transfers)
7. Add monitoring (uptime, alerts)
8. Add SSL/certificates for backend

Phase 3: Hardware

9. Buy Muse 2 EEG headset (\$250)
 10. Connect real GCR scores
 11. Test focus-based autonomy flow
 12. Document real-world usage
-

13. Known Issues & Fixes

Issue 1: PM2 Process Keeps Restarting

Symptom: count increases **Fix:** Check logs with `pm2 logs taurus-backend` **Cause:** Usually syntax error in TypeScript

Issue 2: GCR API Returns HTML

Symptom: GCR score stays at 0.85 **Fix:** Use manual override `/setgcr 90` **Root Cause:** HuggingFace endpoint broken

Issue 3: Telegram Widget Not Showing

Symptom: curl doesn't see Telegram script **Fix:** Normal — script injected client-side via `useEffect`
Verify: Open in actual browser, not curl

Issue 4: /admin Returns 401/307

Symptom: Redirected to `/login` **Fix:** Normal — auth working correctly **Login:** Use Telegram Login Widget at `/login`

15. Handoff Checklist for Next Agent

Before continuing, verify:

- ☐ PM2 backend running: `pm2 status`
 - ☐ Backend healthy: `curl http://localhost:3006/health`
 - ☐ Telegram bot responding: Send `/start` to @TaurusAIOpsBot
 - ☐ GCR override works: `curl "http://localhost:3006/api/set-gcr?score=0.92"`
 - ☐ Platform config in place: Send `/platforms` to bot
 - ☐ All docs exist: `ls docs/session-outputs/`
-

16. Code References

What	Where
Platform config (URLs)	<code>simple-unified.ts:17-26</code>
GCR override logic	<code>simple-unified.ts:60-85</code>
Deploy command handler	<code>simple-unified.ts:265-300</code>
<code>/platforms</code> command	<code>simple-unified.ts:300-320</code>
<code>/help</code> command	<code>simple-unified.ts:225-244</code>
Telegram polling	<code>simple-unified.ts:187-392</code>
